

Shoes and Foot Plate Mounting

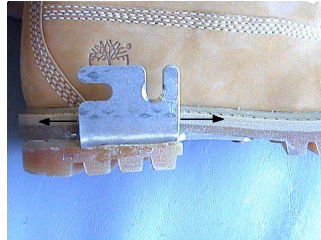

- Shoes need to accommodate the foot plate riveted to the sole.
- Place under heel or cut into crepe of athletic shoes(may need to reinforce.)
- Foot plate needs to be mounted a day before the fitting so the glue can dry.
- The large holes on the plate are for manufacturing and are not intended for use in mounting.
- Athletic shoes are a great fashion statement for parents and kids if support is not needed or provided by an AFO/SMO

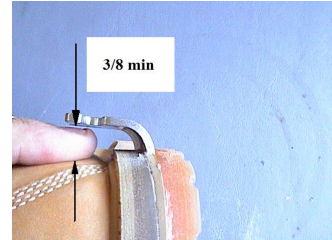

3 sizes

Lateral mount

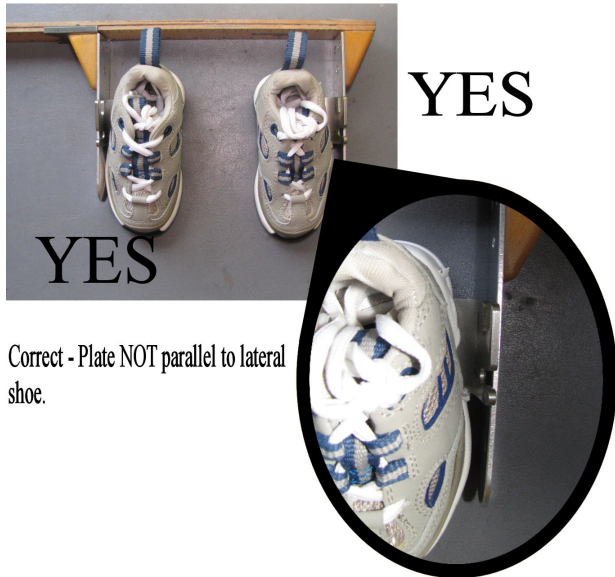

center of plate placed at ankle center

room for orthotic

Mount the plates for proper foot position. Slight misalignment can be corrected with the orthotic.

Correct - slight external rotation.

Correct - Plate NOT parallel to lateral shoe.

Incorrect - internal rotation

Incorrect - Plate parallel to lateral shoe causes internal rotation of feet.
